Skills: Node, JavaScript, React/Redux, Git/GitHub, Express, SQL, PostgreSQL, Sequelize, Webpack, HTML5, CSS3, Axios, Ajax, Bootstrap, TailwindCSS, Linux, Firebase, React Native, Next.js

TECHNICAL PROJECTS

Beatdriver | Software Engineer | 11/2022 | [Github Repo](#) | [Deployed](#)

Beatdriver is a beginner-friendly music creation tool you can use right in the browser. Users can create beats with built-in sounds and effects, upload their samples, and save and record their projects to share with anyone!

- Developed with Next.js, React, Firebase, Web Audio API, and Tailwind CSS
- Designed and executed an upload feature, enabling users to upload their own samples and photos
- Crafted and integrated the save, load, edit, and delete functionalities for user projects
- Implemented a collaborative feature allowing users to edit and save others' tracks
- Set up Firebase authentication via Google sign-in accounts

Chit Chat | Software Engineer | 12/2022 | [Github Repo](#) | [Deployed](#)

Chit Chat is an app where users can message other logged-in users. The primary focus of this app was to set up a real-time chat with a filter to block toxic messages.

- Developed with React Native, Firebase, and Tensorflow.js
- Engineered and executed the central chat feature with Firebase, facilitating communication and image exchange among users
- Integrated Tensorflow.js to screen for and flag toxic messages for user safety
- Established secure authentication through local Email/Password with Firebase
- Directed unauthenticated users to the login page with private route integration

GameMap | Software Engineer | 10/2022 | [Github Repo](#)

GameMap is an e-commerce website that sells video games. Users can view all products and add games to their cart for checkout.

- Developed with the PERN stack and Material UI
- Designed the main layout of the website
- Designed and implemented the feature to add items, increase/decrease items, and remove items from the cart.

EXPERIENCE
